

## Assignment 1.4 AI Labs

### Image Analyzer - Analyzing the notes I made during the workshop

I asked Gemini what it thinks this is and this was the response:

*This appears to be a page of handwritten notes, likely taken during a lecture, workshop, or discussion.*

*The main themes of the notes seem to be:*

- **Stereotypes:** There are several points about judging people, the danger of a "single story," and having an open mind.
- **Cultural Diversity:** The notes list names of people from Nigeria and India.
- **Communication:** One note mentions the importance of knowing your audience.
- **Personal Reflection:** There are also notes on values like "Integrity" and "Trust," and a personal anecdote about packing for a trip.

*It looks like notes from a thought-provoking session, possibly related to a class on sociology, communication, or a diversity and inclusion workshop.*

**ChatGPT on the other hand had an interesting response for the same prompt and image:**

*To proceed, I'll need to visually inspect the image. Hang tight while I process it.*

*The image you uploaded appears to show a **dark, partially decayed object on a light-colored surface**—possibly concrete or stone. At first glance, it resembles:*

- *A **dried or decomposing small animal or bird**, possibly a rodent.*
- *Alternatively, it could be a **plant root or clump of organic material** (e.g. dried seaweed, bark, or decayed vegetation), especially if it's near a body of water or a garden.*
- *There are **legs or appendage-like extensions** visible, which lean more toward an animal rather than plant material.*

*Could you clarify where this was found or provide any context (e.g. smell, location, size)? That could help narrow it down—especially whether it's something biological, dangerous, or just debris.*
